1. INTRODUCTION

White Rivers Exploration (Pty) Ltd (White Rivers Exploration) submitted an online Prospecting Right and Environmental Authorisation Application to the Free State Department of Mineral Resources and Energy on the 7th March 2024. The online application was successful and the project was allocated the reference number FS 30/5/1/1/2/10696 PR. Acceptance of the Prospecting Right application was received on the 25th March 2024. If the application is granted, White Rivers Exploration will be enabled to ascertain if economically viable mineral deposits exist within the application area. The minerals of interest include:

- Gold
- Silver
- Coal
- Cobalt
- Copper
- Diamond (Alluvial)
- Iron
- Manganese
- Molybdenum
- Nickel
- Lead
- Platinum Group Metals
- Rare Earths
- Sulphur
- Uranium
- Tungsten
- Zinc

The proposed project will be known as New Kroonstad North and it will aim to explore and quantify the potential mineral deposits. In order to undertake prospecting activities, White Rivers Exploration requires a Prospecting Right in terms of the Mineral and Petroleum Resources Development Act, 2002 (MPRDA, Act No.28 of 2002, as amended). White Rivers Exploration is also required to obtain an Environmental Authorisation (EA) in terms of the National Environmental Management Act, 1998 (NEMA, Act No. 107 of 1998, as amended) which involves the submission of a Basic Assessment Report (BAR), and Environmental Management Programme Report (EMPR) as well as undertaking a Public Participation Process (PPP). Shango Solutions (Pty) Ltd (Shango Solutions) has been appointed by White Rivers Exploration as the Environmental Assessment Practitioner (EAP) to assist in complying with these requirements.

2. AIM OF THE BACKGROUND INFORMATION DOCUMENT

Public Participation forms an integral part of the application process. The Background Information Document (BID) offers the reader the opportunity to obtain information, comment, raise issues of concern and collaborate in the development of the process. The distribution of this document is a crucial step in advising the reader on how to become involved in the process.

This document aims to provide the reader with basic information regarding the proposed project which includes:

- An introduction to the project, including location details.
- An indication of the proposed activities and the legal framework in which the project is executed.
- Environmental impacts that may potentially occur.
- An explanation of the Public Participation Process (PPP) to be followed.
- An explanation of how to become involved as an Interested and Affected Party (I&AP).

3. PROJECT LOCALITY

The project area covers an aerial extent of 18 340.4536 hectares (ha) (Figure 1) and is situated in the Magisterial Districts of Kroonstad and Koppies, approximately 25 kilometres (km) north of Kroonstad town in the Free State Province of South Africa. 4. PROJECT DESCRIPTION

The following prospecting activities are detailed as part of the PWP during Year 1 to Year 5 of the project:

1. Data Gathering:

Desktop Studies

[Year One; Duration: 12 months]

Data Acquisition

[Year One; Duration: 12 months]

All historical data detailing the position and economic potential of the target horizons will be revisited. The data obtained will be in the form of historical drillhole information, cadastral maps, geological maps, geophysical surveys (all available existing published gravimetric, radiometric, magnetic, seismic data, remote sensing data, as well as any information pertaining to previous exploration or mining will be consulted and integrated). Data will be scrutinised and verified (QA/QC procedure).

Database, Map Generation and Development of Geological Model:

[Year One; Duration: 6 months]

The above data will be compiled into a geological database for the area that will be utilized to present the relevant geological data in useable GIS digital map format. These different data sets will be plotted on a base map of the project and surrounding areas in order to develop a geological model. This model will be used to further refine the exploration programme for the target area.

Field Visit:

[Year One; Duration: 1 week]

A field visit will be undertaken to familiarise the applicant with surface features (such as infrastructure, outcrops, water bodies and wetlands) in the project area and to meet the surface landowners. During this visit farm boundaries within the project area and farming activities will be verified. An effort will be made to identify any factors that may impact the exploration programme.

2. Geophysical Survey

Geophysical surveys conducted by mining companies are available and could be acquired without the need for further surveys. A seismic survey was conducted along a line of 60 km long by Anglo Gold Ashanti and initial discussions indicate that it might be possible to purchase this line. Regional aeromagnetic surveys are available and will be acquired and interpreted in conjunction with the borehole and other data. Based on a favourable outcome of the work in Year One, the decision will be taken to purchase this survey.

If the regional geophysical survey is favourable, further ground geophysical investigations (magnetic) will be carried out.

Geophysical Survey and Seismic Survey:

[Year Two; Duration: 12 months]

Data Compilation and Interpretation:

[Year Two; Duration: 12 months]

Refinement of Geological Model:

[Year Two; Duration 12 months]

Should the seismic surveys be purchased, they will be integrated with the geological database and presented in useable GIS digital map formats. This information will also be incorporated into the geological model in order to further define the resource.

3. Re-Visit Key Historic Drillhole Core, and Re-Logging and Re-Sampling: [Year Two; Duration: 6 months]

Based on the initial geological model, specific key drillholes previously drilled in the area will be re-visited and negotiations with the owners undertaken to obtain access to the core. Once access to the historical core is obtained, the core will be re-logged and, if necessary, re-sampled. This activity will allow verification of the historical drillhole logs and consequently increase confidence in the data underpinning the geological model.

4. Drilling

Invasive prospecting will take the form of diamond drilling and will occur in Years 3 and 4. This information will then be integrated into the geological model to further define the orebodies, which when combined with the assay information will be utilised to define a resource.

4.1 Drilling of 3 Diamond Drillholes to a Depth of 700 m Each: [Year Three; Duration: 12 months]

Based on the initial geological model established, a diamond drilling programme comprising of four boreholes will be undertaken.

4.2 Revise Geological Model: [Year Three; Duration: 6 months]

The data obtained from the logging and sampling of the historical drillholes will be integrated into the geological model to confirm the geology and drilling targets.

5.1 Drilling of 3 Diamond Drillholes to a Depth of 700 m Each: [Year Four; Duration: 12 months]

Should the drilling programme prove to be successful in Year 3, an additional three holes will be considered. It is imperative to note that the drilling in Year 4 is dependent on positive outcomes from the drilling in Year 3. Drilling will be conducted in a competent and environmentally responsible manner including rehabilitation of the drill sites to their original state. Plastic lining will be placed underneath the rig motors to prevent oil seepage. It is noted that no drilling fluids other than water for dust suppression, will be utilised in the case of diamond drilling. Environmental rehabilitation measures will be included in the contract with the drilling company and environmental rehabilitation costs will be included in the drilling costs.

5.2 Finalisation of 3D Geological Model: [Year Five; Duration: 4 months]

Based on the logging and sampling of the core, the 3D geological model will be updated and finalised for use during resource estimation.

5.3 Code Compliant Mineral Resource Estimation: [Year Five; Duration: 4 months]

Utilising the finalised geological model together with historical assay results and any results from the drilling programme, a code compliant resource estimate will be performed.

5.4 Concept Study [Year Five; Duration: 4 months]

Should the exploration activities yield promising results, a concept study will be conducted. During this investigation, resources will be converted to reserves and a conceptual mine plan and schedule shall be established. This will reveal whether the deposit is economically mineable.

5. GEOLOGY AND PROSPECTING TARGETS

The application area has been selected based predominantly on historical data available for the region, which indicates the potential for economically viable resources to occur. The Free State Goldfield was discovered by geophysical means during the 1930's, when Dr. R Krahmman delineated the edge of the Witwatersrand Basin by mapping magnetic shales of the West Rand Group with a magnetometer. This was followed by extensive diamond exploration drilling, which intersected the auriferous conglomerates of the Central Rand Group (Figure 2). As a result, one of the major goldfields on earth was developed.

Welkom, the largest town in the Free State Goldfield, is situated about 270 kilometres towards the southwest of Johannesburg, about 1 370 metres above mean sea level. The Welkom Goldfield hosted eleven mines in the triangle between Allanridge, Welkom and Virginia. These mines have collectively produced in excess of 9.6 million kilogrammes of gold.

The main targets of the exploration project are the conglomerates (reefs) of the Central Rand Group of the Witwatersrand Supergroup and the Ventersdorp Contact Reef of the Ventersdorp Supergroup.

The Witwatersrand Supergroup which hosts gold is generally overlain by 500 metres of Karoo Supergroup strata, predominantly horizontally bedded sandstones and shales of the Eccia Group. The Eccia Group contains coal at shallow depths which might be exploitable. In addition to gold, the primary prospecting target, silver, uranium, sulphur, diamonds, rare earths and platinum group metals are currently and have been historically, extracted as by-products of gold. Base metals (cobalt, copper, manganese, molybdenum, nickel, lead, tungsten and zinc) could potentially be present in mafic intrusions.

1. INLEIDING

White Rivers Exploration (Pty) Ltd (White Rivers Exploration) het op 7 Maart 2024 'n Prospekteerreg- en Omgewingsmagtigingsaansoek aanlyn by die Vrystaatse Departement van Minerale Hulpbronne en Energie ingedien. Die aanlyn-aansoek was suksesvol en die verwysingsnommer FS 30/5/1/1/2/10696 PR is aan die projek toegeken. Ontvangs van die Prospekteerreg-aansoek is op 25 Maart 2024 erken. As die aansoek toegestaan word, sal White Rivers Exploration kan vasstel of daar ekonomies lewensvatbare mineraleafsettings in die aansoekgebied is. Die minerale van belang is:

- Goud
- Silwer
- Steenkool
- Kobalt
- Koper
- Diamante (alluviaal)
- Yster
- Mangaan
- Molibdeen
- Nikkel
- Lood
- Platinumgroep-metale
- Seldsame aardes
- Swawel
- Uraan
- Wolfram
- Sink

Die voorgestelde projek sal bekend staan as New Kroonstad North en sal daarop gemik wees om die potensiële mineraleafsettings te verken en te kwantifiseer. Ten einde prospekteeraktiwiteit te onderneem, benodig White Rivers Exploration 'n Prospekteerreg ingevolge die Wet op die Ontwikkeling van Minerale en Petroleumhulpbronne, 2002 (MPRDA, Wet 28 van 2002, soos gewysig). White Rivers Exploration moet ook 'n Omgewingsmagtiging (OM) verkry ingevolge die Wet op Nasionale Omgewingsbestuur, 1998 (NEMA, Wet 107 van 1998, soos gewysig), wat die indiening van 'n Basiese Asseseringsverslag (BAV) en Omgewingsbestuursprogramverslag (OBPV) behels, asook dat 'n Openbare Deelnameproses (ODP) onderneem word. Shango Solutions (Pty) Ltd (Shango Solutions) is aangestel deur White Rivers Exploration as die Omgewingsassesseringspraktisyn (OAP) om te help om aan hierdie vereistes te voldoen.

Die verspreiding van hierdie dokument is 'n noodsaaklike stap om die leser in te lig oor hoe om by die proses betrokke te raak.

Hierdie dokument is daarop gemik om die leser van basiese inligting rakende die voorgename projek te voorsien, wat die volgende insluit:

- 'n Bekendstelling van die projek, asook besonderhede oor die ligging.
- 'n Aanduiding van die voorgename aktiwiteite en die regsraamwerk waarbinne die projek uitgevoer word.
- Omgewingsimpakte wat potensieel kan voorkom.
- 'n Verduideliking van die openbare deelnameproses (ODP) wat gevolg sal word.
- 'n Verduideliking van hoe om as 'n belanghebbende en geraakte party (B&GP) betrokke te raak.

3. PROJEKLIIGING

Die projekgebied dek 'n lugomvang van 18 340.4536 hektaar (ha) (Figuur 1) en is geleë in die Kroonstad- en Koppies-magistraatsdistrikte, ongeveer 25 kilometer (km) noord van die dorp Kroonstad in die Vrystaatprovinsie van Suid-Afrika. Tabel 1 dui die eiendomsbesonderhede binne die projekgebied aan.

4. PROJEKBESKRYWING

Die volgende prospekteraktiwiteite word uiteengesit as deel van die PWP gedurende Jaar 1 tot Jaar 5 van die projek:

1. Dataversameling:

Lessenaarstudies

[Jaar een: Duur: 12 maande]

Dataverkryging

[Jaar een: Duur: 12 maande]

Alle historiese data wat die posisie en ekonomiese potensiaal van die teikenhorisonne uiteensit, sal weer nagegaan word. Die data wat verkry word, sal in die vorm wees van historiese boorgatinligting, kadasterkaarte, geologiese kaarte, geofisiese opnames (alle beskikbare, bestaande gepubliseerde gravimetrie, radiometrie, magnetiese, seismiese en afstandwaarnemingsdata, asook enige inligting oor vorige ontginning of mynbou sal nagegaan en ingesluit word). Data sal ondersoek en geverifieer word (QA/QC-prosedure).

Databasis, kaartgenerering en ontwikkeling van geologiese model:

[Jaar Een: Duur: 6 maande]

Die bogenoemde data sal in 'n geologiese databasis vir die gebied saamgestel word, wat gebruik sal word om die relevante geologiese data in bruikbare GIS- digitale kaartformaat voor te stel. Hierdie verskillende datastelle sal op 'n basiskaart van die projek en omliggende gebiede aangebring word ten einde 'n geologiese model te ontwikkel. Hierdie model sal gebruik word om die verkenningprogram vir die teikengebied verder te verfyn.

Veldbesoek:

[Jaar een: Duur: 1 week]

'n Veldbesoek sal onderneem word om die aansoeker te vergewis van oppervlakkenmerke (soos infrastruktuur, dagsome, watermassas en vleilande) in die projekgebied en om die oppervlakgrondeienaars te ontmoet. Tydens hierdie besoek sal plaasgrense binne die projekgebied en landbouaktiwiteite geverifieer word. 'n Poging sal aangewend word om enige faktore te identifiseer wat moontlik 'n impak op die ontginningprogram kan hê.

2. Geofisiese opname

Geofisiese opnames wat deur mynmaatskappye gedoen is, is beskikbaar en kan verkry word sonder om verdere opnames te onderneem. 'n Seismiese opname is deur Anglo Gold Ashanti gedoen langs 'n 60 km lange lyn, en aanvanklike besprekings toon dat dit dalk moontlik is om hierdie lyn te koop. Streeks- aëromagnetiese opnames is beskikbaar en sal verkry en geïnterpreteer word in samehang met die boorgat- en ander data. Op grond van 'n gunstige uitkoms van die werk in Jaar Een, sal die besluit geneem word om hierdie opname aan te koop.

As die streeks- geofisiese opname gunstig is, sal verdere geofisiese grondopnames (magneties) uitgevoer word.

Geofisiese opname en seismiese opname:

[Jaar twee: Duur: 12 maande]

Datasamestelling en interpretasie:

[Jaar twee: Duur: 12 maande]

Verfyning van die geologiese model:

[Jaar twee: Duur: 12 maande]

Indien die seismiese opnames aangekoop word, sal dit met die geologiese databasis geïntegreer word en in bruikbare GIS- digitale kaartformate aangebied word. Hierdie inligting sal ook in die geologiese model geïnkorporeer word om die hulpbron verder te definieer.

3. Herbesoek van sleutel- historiese boorgatkern, en heraantekening en nuwe monsterneming: [Jaar twee: Duur: 6 maande]

Op grond van die aanvanklike geologiese model sal spesifieke sleutelboorgatkerns wat voorheen in die gebied gesink is, weer besoek word, en daar sal met die eienaars onderhandel word om toegang tot die kern te verkry. Wanneer toegang tot die historiese kern verkry is, sal die kern weer aangeteken en, indien nodig, hertoets word. Hierdie aktiwiteit sal die verifikasie van historiese boorgatlogboeke toelaat en gevolglik vertroue verhoog in die data wat die geologiese model ondersteun.

4. Boorgate

Indringende prospektering sal plaasvind in die vorm van diamantboorgate in Jaar 3 en 4. Hierdie inligting sal dan in die geologiese model geïntegreer word om die ertsliggame verder te definieer, wat, wanneer dit gekombineer word met die toetsinligting, gebruik sal word om 'n hulpbron te definieer.

4.1 Boor van 3 diamantboorgate tot 'n diepte van 700 m elk: [Jaar drie: Duur: 12 maande]

Na gelang van die aanvanklike geologiese model wat geskep is, sal 'n diamantboorwerkprogram onderneem word wat uit vier boorgate bestaan.

4.2 Hersien geologiese model: [Jaar drie: Duur: 6 maande]

Die data wat uit die aantekeninge en monsters van die historiese boorgate verkry word, sal by die geologiese model geïntegreer word om die geologie en die boorteikens te bevestig.

5.1 Boor van 3 diamantboorgate tot 'n diepte van 700 m elk: [Jaar vier: Duur: 12 maande]

Indien die boorwerkprogram suksesvol is in Jaar 3, sal 'n bykomende drie gate oorweeg word. Dit is noodsaaklik om daarop te let dat die boorwerk in Jaar 4 afhanklik is van positiewe uitkomst van die boorwerk in Jaar 3. Boorwerk sal op 'n bevoegde en omgewingsverantwoordelike wyse uitgevoer word, insluitend die rehabilitasie van die boorgate tot hulle oorspronklike toestand. Plastiekvoering sal onder die boortoringmotors geplaas word om oliesypeling te voorkom. Dit word aangeteken dat geen boorvloeistowwe, buiten water vir stofonderdrukking, in die geval van diamantboorwerk gebruik sal word nie. Maatreëls vir omgewingsrehabilitasie sal in die kontrak met die boormaatskappy ingesluit word en die koste van omgewingsrehabilitasie sal by die boorkoste ingesluit word.

5.2 Finalisering van 3D- geologiese model: [Jaar vyf: Duur: 4 maande]

Op grond van die aantekeninge en monsters van die kern, sal die 3D- geologiese model bygewerk en gefinaliseer word vir gebruik tydens hulpbronskatting.

5.3 Mineralehulpbronskatting wat aan kodes voldoen: [Jaar vyf: Duur: 4 maande]

Deur gebruik te maak van die voltooid geologiese model tesame met historiese toetsresultate en enige resultate van die boorprogram, sal 'n hulpbronskatting wat aan kodes voldoen, uitgevoer word.

5.4 Konsepstudie [Jaar vyf: Duur: 4 maande]

Indien die eksplorasië-aktiwiteite belowende resultate oplewer, sal 'n konsepstudie gedoen word. Gedurende hierdie ondersoek sal hulpbronne na reserwes omgeskakel word en 'n konseptuele mynplan en skedule sal opgestel word. Dit sal wys of die afsetting ekonomies vatbaar is vir ontginning.

5. GEOLOGIE EN PROSPEKTEERTEIKENS

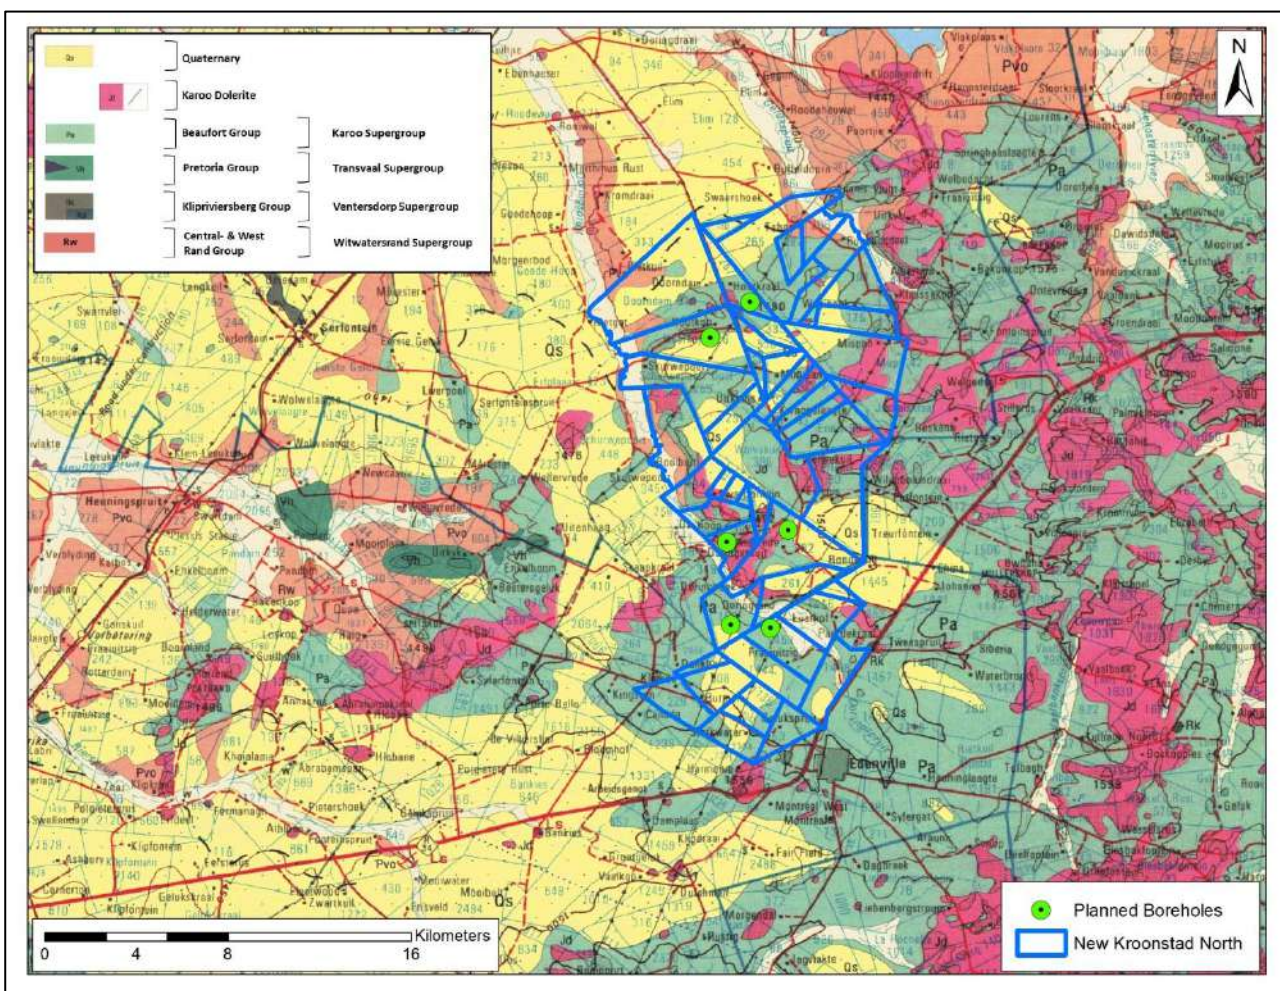

Die gebied waarvoor aansoek gedoen is, is hoofsaaklik gekies op grond van die historiese data wat vir die streek beskikbaar is, en hierdie data dui op die moontlikheid dat ekonomies lewensvatbare hulpbronne voorkom. Die Vrystaatse Goudveld is gedurende die 1930's op geofisiese wyse ontdek, toe dr. R Krahnman die rand van die Witwatersrandkom afgebaken het deur die magnetiese skalie van die Wes Rand-groep met 'n magnetometer te karteer. Dit is gevolg deur uitgebreide eksplorasiëboorwerk vir diamante, wat deur die goudhoudende konglomerate van die

Sentrale Rand-groep (Figuur 2) gesny het. Die gevolg was die ontwikkeling van een van die grootste goudvelde op aarde.

Welkom, die grootste dorp in die Vrystaatse Goudveld, lê ongeveer 270 kilometer suidwes van Johannesburg, en ongeveer 1 370 meter bo gemiddelde seevlak. Welkom se goudveld het elf myne in die driehoek tussen Allanridge, Welkom en Virginia opgelewer. Hierdie myne het gesamentlik meer as 9,6 miljoen kilogram goud gelewer.

Die hoofteikens vir die eksplorasieprojek is die konglomerate (riwwe) van die Sentrale Rand-groep van die Witwatersrand-supergroep en die Ventersdorp-kontakrif van die Ventersdorp-supergroep.

Die Witwatersrand-supergroep, wat goud dra, is oor die algemeen bedek deur 500 meter Karoo-supergroepstrata – hoofsaaklik horisontale lae sandsteen en skalie van die Ecca-groep. Die Ecca-groep bevat steenkool op lae vlakke, wat ontginbaar kan wees. Bykomend tot goud, is die primêre prospekteerteikens silwer, uraan, swael, diamante, seldsame aardes en platinumgroep-metale tans en ook histories as neweprodukte van goud onttrek. Basismetale (kobalt, koper, mangaan, molibdeen, nikkell, lood, wolfram en sink) kan moontlik in mafiese intrusies teenwoordig wees.
